Disaster Mapping & Relief Management System — ER Diagram

Database disaster_and_relief_management (MySQL 8) · core entities and their relationships

How to read this diagram

PK primary key · FK foreign key · (1:N) one-to-many, the line is a foreign key · (M:N) many-to-many, stored in a link table.
Line ends: double bar = exactly one · circle + fork = zero or many (every M:N side is optional).

Simplified view: 9 of the 22 tables.

The 7 link tables behind the M:N lines are not drawn. Also not drawn: disaster_track, relief_distribution, relief_recipient, shelter_assignment, users, audit_log, and the optional Area_ID links on damage and affected_person.
